Notice!

The product can support GRBL open source software by updating GRBL firmware. Once GRBL firmware is updated, this product will not support phone software, original PC software and the roller components any longer.

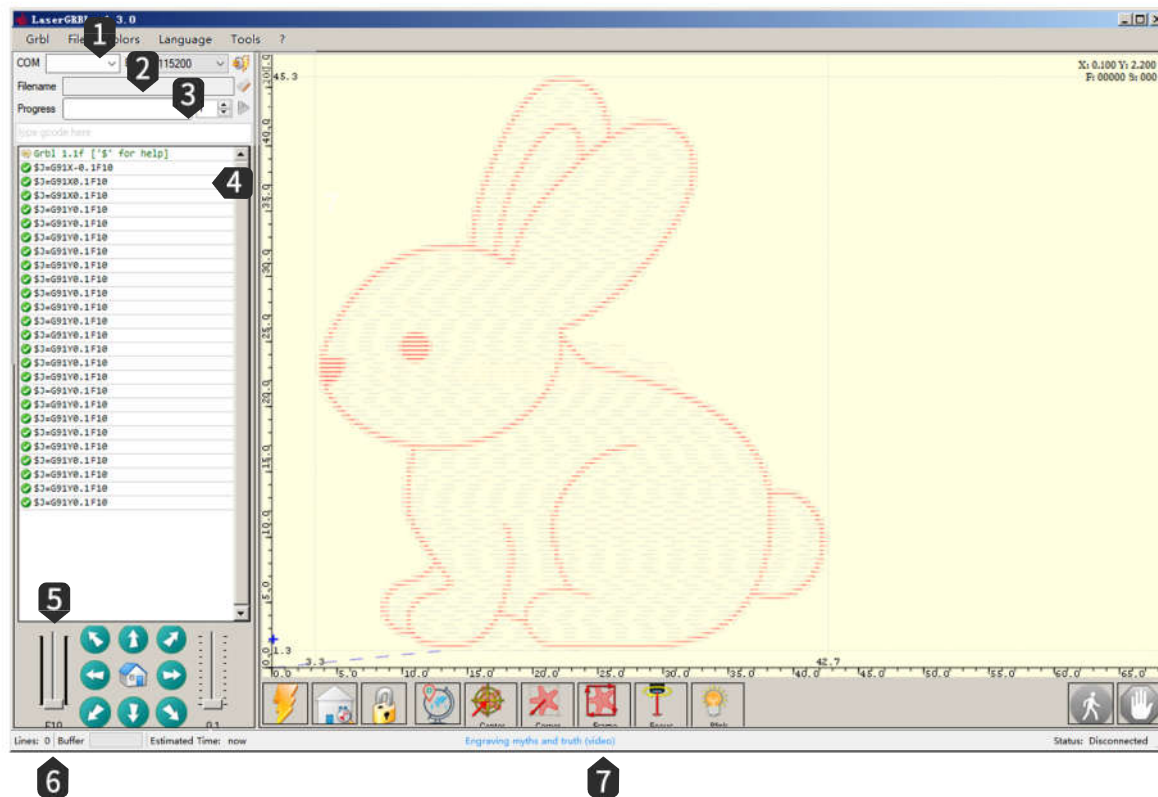

Path to install GRBL:

double click the USB memory disk to open folder /L3-USB memory disk data/L3 firmware update guide/For detailed steps, please watch the demo video in USB memory disk.

Video of GRBL installation and firmware updating

Introduction to LaserGRBL software interface icon functions:

① Connection settings:

Select serial port and appropriate connection baud rate according to the grbl firmware configuration.

② File control:

Display the loaded file name and the engraving process. Green "Play" button will start to execute the program.

③ Manual command:

You can enter any G code line here then press the "input" button, the command will be placed in the queue.

④ Command log and command return code:

Display the commands in queue as well as the execution status and errors

⑤ Step control:

Allow manual laser positioning. The vertical slider on the left can control the speed of movement, while the slider on the right can control the step length.

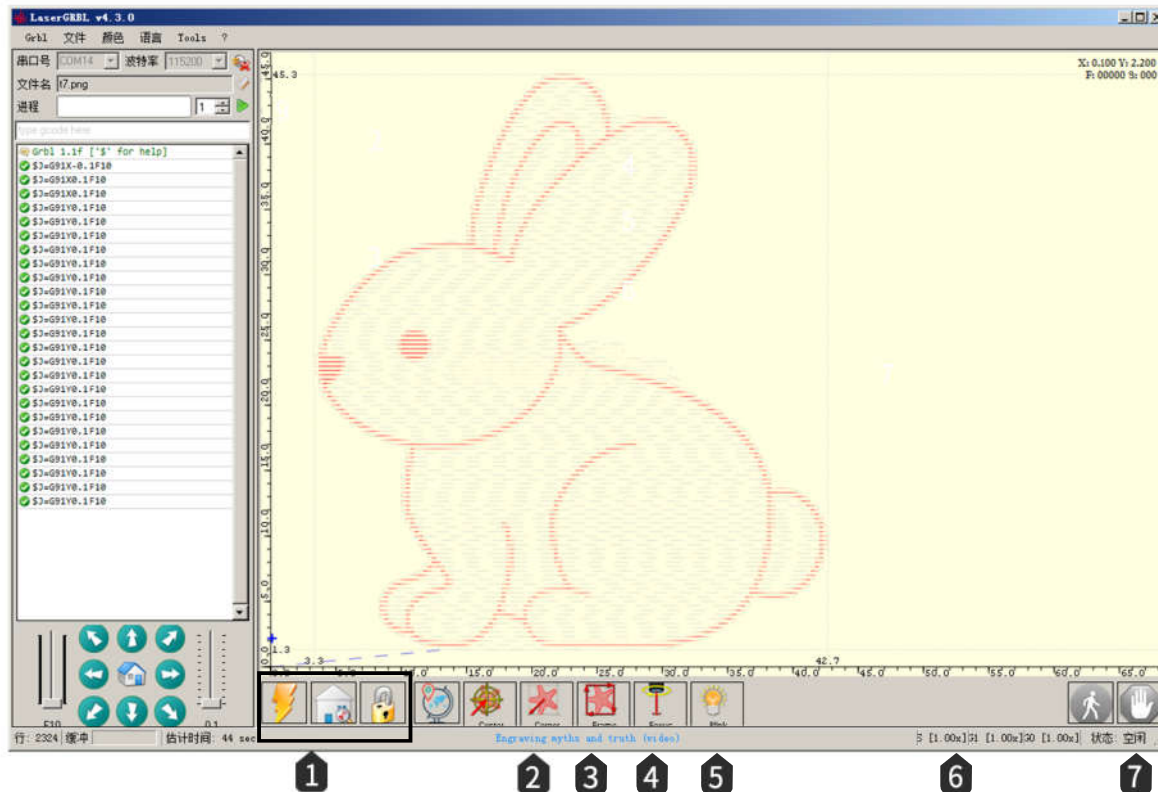

⑥ Prediction of line number and time:

LaserGRBL can estimate the program execution time based on actual speed and work progress.

⑦ Engraving preview:

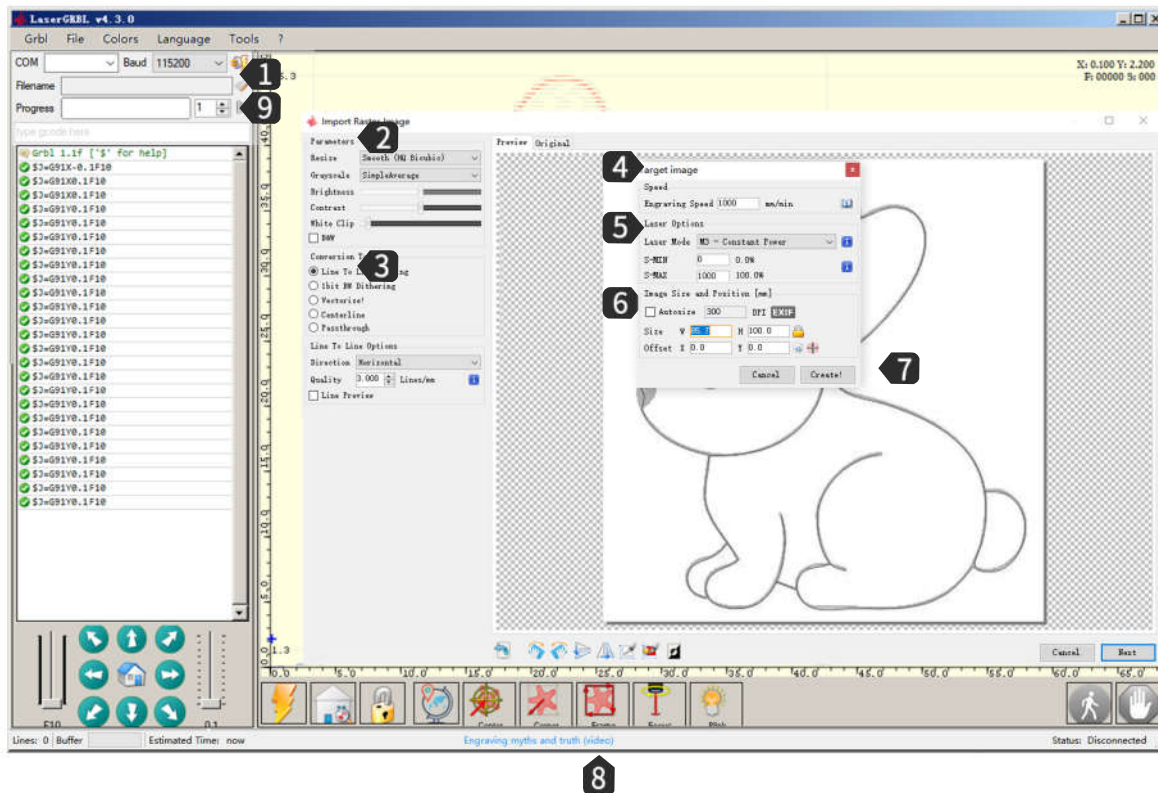

The final work will be previewed in this zone. During the engraving process, a small blue cross will display the current laser position during the machine operation.
